DAY 01 / 11 · WEB DEV IN 11 DAYS · GUIDED

Your first web page

HTML: the language that says what each piece of a page is

ShowShelf after today: **a web page about one TV show, Friends**

TODAY

The plan for the next 90 minutes

Minutes	Topic
15	Welcome, the course and the Lab
14	Elements: tags and content
11	Attributes: a class and a picture
9	Headings and lists
12	Links and tables
9	Sections and comments
5	The big idea, and questions
15	This afternoon in the Lab

WARM-UP · NO WRONG ANSWERS

Three quick questions

1. Which websites or apps do you use every day?
2. When you open a web page, what arrives on your computer?
3. A page about a TV show: what pieces does it usually have?

HOW EVERY DAY WORKS

Morning: ideas. Afternoon: the Lab.

Morning

90 minutes: the ideas, each one shown working, live

Afternoon

3–4 hours alone in ShowShelf Lab, one small step at a time

The Lab

Explanation, code box, preview that changes as you type, Check

Day 11

Your own ShowShelf website, online

You can't break anything: every step saves itself, and **Start again** puts a step back to how it began.

Anatomy of an element

```
<h1>Breaking Bad</h1>
```

Opening tag

<h1>: what this piece is

Content

What the visitor sees

Closing tag

</h1>: same name, with a slash

HTML

Boxes inside boxes

strong: important, shown bold. **em**: emphasis, shown in italics.

Close the inner element first.

Extra spaces and new lines don't show. The tags decide where things go.

```
<p>
  A <strong>chemistry teacher</strong>
  with money problems
  <em>turns to crime</em>.
</p>
```

HTML · STEPS 4–5

Attributes: extra information

Inside the opening tag: **name="value"**.

class is a label you choose. Tomorrow, CSS uses it.

img has no closing tag. **src**: where the picture is. **alt**: what it shows.

```
<p class="meta">AMC · 2008–2013</p>

<img class="poster"
     src="poster.svg"
     alt="Poster for Breaking Bad">
```

HTML · STEPS 6–8

Headings and lists

h1 once, for the page title. **h2** for each part.

ul: bullets. **ol**: numbers, when the order matters.

li: one item, always inside the list.

```
<h2>Main characters</h2>
<ul>
  <li>Walter White</li>
  <li>Jesse Pinkman</li>
  <li>Skyler White</li>
</ul>
```

A link goes somewhere

```
<p>
  More on <a href="https://www.tvmaze.com/shows/169/breaking-bad">TVmaze</a>.
</p>
```

href

Where the link goes

Content

What people click

https://

Without it, the browser looks for a file on your own site

HTML · STEP 10

A table: rows of cells

tr: one row. **th**: a heading cell. **td**: a normal cell.

Every row has the same number of cells.

New row? Copy a whole row, paste it **before </table>**, change the numbers.

```
<table>
  <tr>
    <th>Season</th>
    <th>Episodes</th>
  </tr>
  <tr>
    <td>1</td>
    <td>7</td>
  </tr>
</table>
```

HTML · STEPS 11–12

The parts of a page

Semantic elements: the name says what the part is. Nothing changes on screen.

A **section** holds one heading and what belongs to it.

Comments are notes for humans. **-->** ends one: forget it and the rest disappears.

```
<header>ShowShelf</header>
<main>
  <article>
    <h1>Breaking Bad</h1>
    <section>
      <h2>Main characters</h2>
      <ul>…</ul>
    </section>
    <!-- Seasons: one row each -->
  </article>
</main>
<footer>…</footer>
```

THE BIG IDEA

HTML says what each piece of a page is. Tomorrow, CSS says how it looks.

THIS AFTERNOON IN THE LAB

Twelve small steps to the Friends page

Text

1 Your first HTML tag

2 Add a paragraph

3 Bold and italic

Labels, pictures

4 Attributes and a class

5 Add the poster

Lists and a link

6 Subheadings and a list

7 A longer list: the cast

8 A numbered list

9 A link to another website

Table, structure

10 A table of seasons

11 Group it with sections

12 Notes for humans

Milestone: the Friends page with a poster, lists, a link and a seasons table, all 12 steps checked

Finished early? Extra challenges B1 to B3: a spoiler box, a poster with a caption, a second show.

STUCK? IN THIS ORDER

Message, Console, hint, answer, ask

1

Message

Read the “Not yet” message. It says what to fix.

2

Console

Under the preview: click its title bar. Red lines name the problem and the line.

3

Hint

Two per step. The second is nearly the answer.

4

Answer

Compare it with yours. Find the difference.

5

Ask

The teacher, or the person next to you.

END OF THE DAY

Can you answer these?

1. What's wrong: <h1>Friends<h1>
2. Your top three characters: ul or ol?
3. What is the alt attribute for?

TOMORROW

Style it, with CSS

Colours, fonts, spacing and a card design. You choose your own colours, and they stay with you for the rest of the course.
